ISO/PC 283 Chairman's report

Date: 05.07.2016

ISO/PC 283 Chairman's report

Options on disapproval of a DIS

- Prepare a second DIS (DIS 2)
- Publish the draft as a Technical Specification (TS)
- Back stage to Committee Draft
- Note ISO/DIS 45001 achieved 71% P-member approval, following approval of the CD2.
- Going back a stage is therefore not a viable option.
- 71% exceeds the 66% P-member approval needed to publish as a TS.
- Noting the volume of comments and the issues raised, the Secretariat recommends preparing a DIS 2.

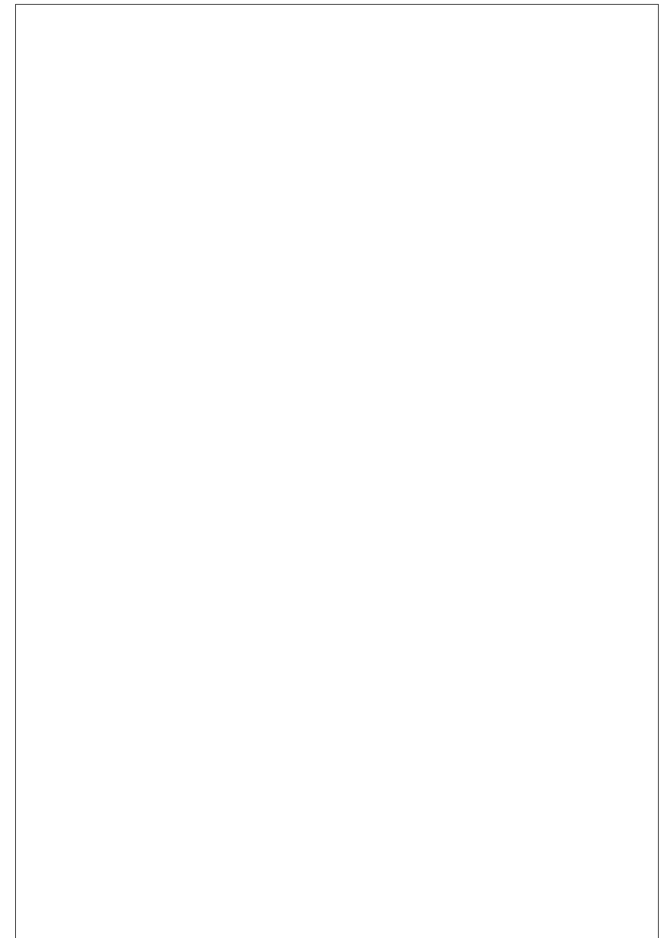

Next steps

We will also need to decide if we wish to hold an FDIS stage, and the pros and cons of doing so (probably at the next meeting).

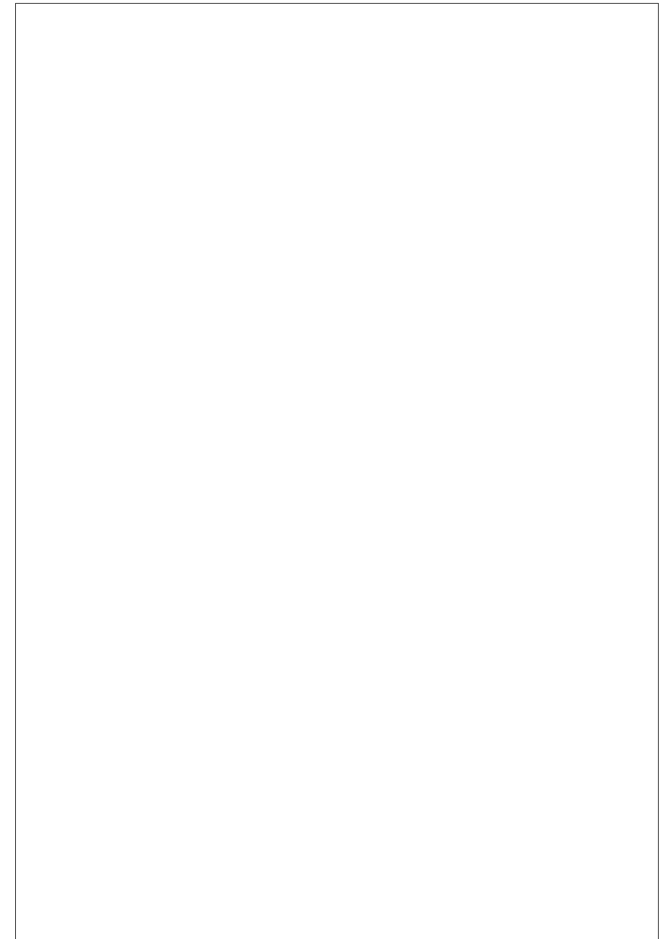

Note: ISO's default position is now not to hold an FDIS

We were pleased to note the results of the ballot on the DIS, which showed a 71% in favour but failed to secure the necessary votes for moving forward to FDIS.

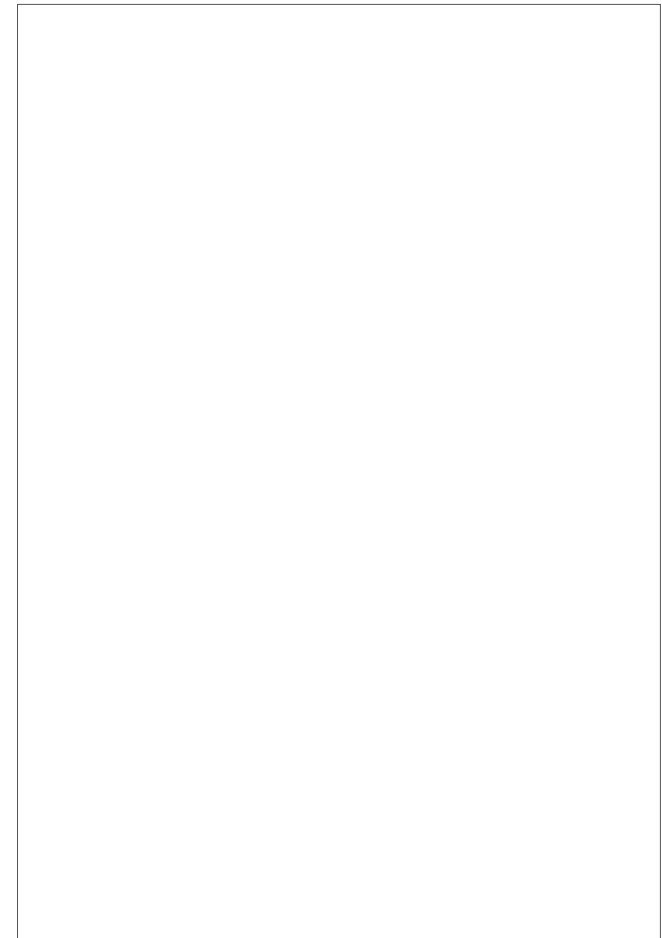

ISO/PC 283 Chairman's report

We were pleased to note the results of the ballot on the DIS, which showed a 71% in favour but failed to secure the necessary votes for moving forward to FDIS.

Timeline to publication of ISO 45001

Event	DIS2, No FDIS	DIS2, with FDIS
2 nd meeting in October	Oct	Oct
1 month editing/preparing DIS2	Nov	Nov
2 month translation period	Dec/Jan	Dec/Jan
2 month DIS 2 ballot	Feb/Mar	Feb/Mar
1.5 month before the next PC283 meeting	May	May
1 month editing and preparing the text for publication (or for FDIS)	<u>June</u>	June
FDIS (2 month translation for FDIS; 2 month FDIS ballot; 1 month preparing text for publication)		<u>Nov</u>

Thank you!

A close-up, profile view of a woman's face, looking towards the right. She has dark hair and a slight smile. The image is partially obscured by a vertical green bar on the left and a horizontal green line above it.

No Doubt.
